

# BeSS report – February 2017

Data compiled by Valérie Desnoux – H-alpha monitoring

Observateur	Nb spec
Guarro Fló	21
GARDE	20
Daglen	13
Sawicki	13
Graham	8
Berardi	5
Fosanelli	3
Luckas	3
Pollmann	2
Hudson	2
de Bruin	2
<b>Total général</b>	<b>92</b>

- 53 stars were observed
- 11 Observers contributed this month
- 92 Spectra H-alpha

## Objects observed

Classique								?	Herbig
gam Cas	zet Crv	phi Per	2 Ori	V378 Pup	V581 Per	LL CMa	V742 Mon	HD 31648

## Events of the month...

EE: Emission Event, ME: Moderate Events, DE: Decreasing Event

EE	ME	DE
BN Gem	228 Eri	12 Aur
HD 237091	RW Tau	FF Cam
HD 35187B	HD 36112	j Cen
HD 35347	phi And	
HD 57682	phi Per	
LL CMa		
OT Gem		
V1153 Tau		
V420 Pup		
V581 Per		
V725 Mon		

## Emission increase since last observations

### BN Gem

### HD 35187B

### HD 35347

### HD 57682 1yr

### HD 237091

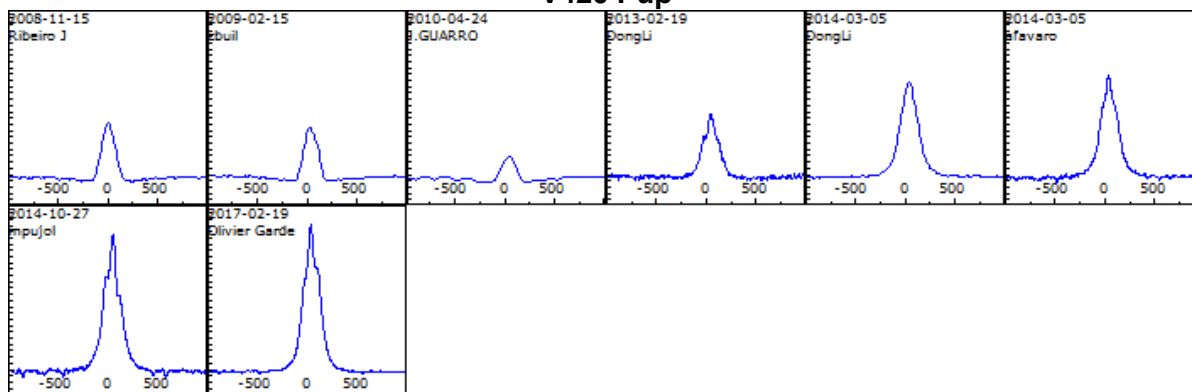

### LL Cma

### OT Gem 1yr

### V420 Pup

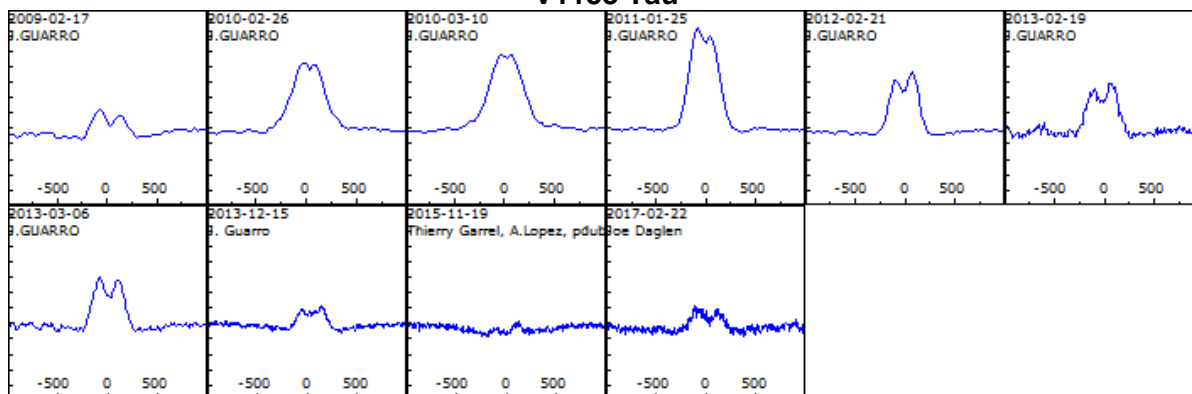

### V581 Per

### V725 Mon

### V1153 Tau

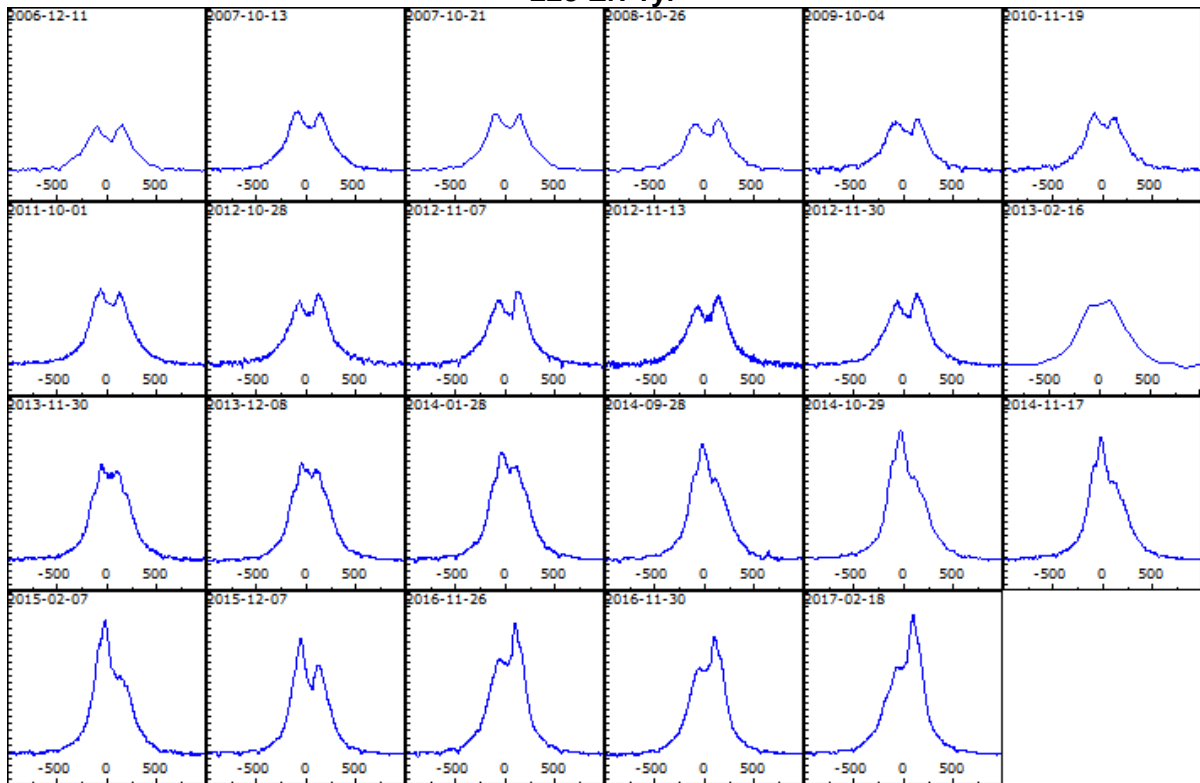

## Moderate evolutions of H-alpha line

### HD 36112

### 228 Eri 1yr

### Phi And 1yr

### Phi Per 1yr

### RW Tau

### Emission decrease of H-alpha line

#### 12 Aur 1yr

#### J Cen

## FF Cam 1yr

### ***Materiel & Method***

For each star having a spectrum loaded in BeSS database for the monthly report the last six spectra in BeSS are displayed. A visual check is performed to detect any change in the H-alpha profile. Sometimes a copy/paste is needed for subtle evolutions.

For each star, which exhibits a change, the above series are generated with the following steps. Each spectrum is zoomed on the H-alpha line. Each profile is scaled on the continuum on a region around 6580 angströms. The Heliocentric correction is applied, and the x-axis is converted into Doppler velocity centered on H-alpha.

If too many spectra of the object are available, a shorter period of observation is displayed and thus the length period is indicated (1yr, 3yrs).

All data are processed with Visual Spec with dedicated function to automatically load BeSS spectra and automatize most of the above processing.
